SMART MODULE™ SERIES - HIGH EFFICIENCY FRAMELESS MONOCRYSTALLINE SOLAR MODULES

ASP-400GSM

The Smart Module™ series is the next generation solar PV module designed for the Smart Grid. ASP's Smart Module™ technology enhances the energy harvest of each module by delivering higher output. The Smart Module™ series features a Smart Box that enables each solar module to produce the maximum available energy, regardless of whether other modules in the array are under performing due to mismatch. The Smart Box delivers module-level data through an RF system for operational management and performance monitoring, while providing the ability to deactivate the high voltage DC bus for safer installation, maintenance or fire fighting.
